

Devathmaj A Kaliyathan

Kerala, India — devathmaj@gmail.com — +91-9526290557 — github.com/Devathmaj — devathmaj.github.io/Portfolio — linkedin.com/in/devathmaj

Summary

Computer Science undergraduate focused on backend systems, observability platforms, distributed infrastructure, Kubernetes orchestration, and reliability-focused system design.

Technical Skills

Languages	Python, JavaScript/TypeScript, C, Go, C++
Backend	FastAPI, Flask, Node.js, Express.js, REST APIs, WebSockets, RBAC
Frontend	React, Tailwind CSS, Vite
Infrastructure	Docker, Kubernetes, Terraform, Linux, Prometheus, Grafana, Loki, Tempo
Databases	PostgreSQL, MongoDB, Redis, SQLite
Other	Hyperledger Fabric, Scikit-learn, Git, Bash, PowerShell, Playwright

Experience

DevOps Intern - Keralavision Broadband Limited (KVBL)

May 2025 – Jun 2025

- Built and operationalized an internal network automation system for configuration backup and operational recovery across multiple NOCs.
- Optimized SSH backup workflows and DNS rule management using Python and Playwright, resulting in a 99.9% success rate for scheduled backup operations.

Projects

Continumm — Network Telemetry & Observability Platform

- Engineered a production-grade network telemetry and observability platform using Flask, PostgreSQL, Prometheus, Grafana, Loki, Tempo, and Alertmanager.
- Designed automated subnet discovery, ICMP polling, telemetry pipelines, distributed tracing, centralized logging, and Kubernetes-based orchestration with Terraform provisioning.
- Implemented reliability and security features including reverse proxy isolation, rate limiting, internal-only services, and metrics-driven alerting workflows.
- Codebase: github.com/Devathmaj/Continumm

Distribution Management System — Enterprise Workflow Platform

- Engineered a full-stack enterprise inventory and distribution platform using FastAPI, React, MongoDB, and JWT authentication.
- Implemented RBAC, approval pipelines, inventory lifecycle tracking, defect management, operational analytics dashboards, and modular REST APIs.
- Reduced inventory management inefficiencies for a deployed client system, helping save approximately INR 5 lakh in operational losses.
- Codebase: github.com/niranjcn/Distribution-Management-System

TRACIENT — Blockchain + AI Welfare Eligibility Platform

- Built a welfare traceability platform integrating Hyperledger Fabric with ML-based eligibility classification and anomaly detection systems.
- Implemented immutable transaction auditing, identity-linked welfare tracking, and role-based verification workflows for transparency and fraud reduction.
- Codebase: github.com/Devathmaj/tracient

ConfessIt — Real-Time Social Platform

- Architected and scaled a real-time social interaction platform using FastAPI, React, MongoDB, Redis, and WebSocket-based communication.
- Designed Redis pub/sub messaging pipelines supporting 500+ concurrent WebSocket connections and containerized services using Docker Compose on DigitalOcean.
- Codebase: github.com/Devathmaj/ConfessIt-V2

Certificates

- **AWS Cloud Technical Essentials** — Authorized by Amazon Web Services, offered through Coursera
- **Google Cloud Fundamentals: Core Infrastructure** — Authorized by Google Cloud, offered through Coursera
- **Python for Data Science** — NPTEL

Education

B.Tech in Computer Science

2022 – 2026

St. Thomas College of Engineering & Technology, Mattanur — **CGPA: 8.13**
